TEMPO® Automated Quality Indicator Solution

TEMPO® is a fully automated enumeration system that tests quality indicators in food products and environmental samples within your laboratory. Connected to your LIMS, TEMPO® provides objective results and ensures data traceability with minimal preparation time.

The Cytek Northern Lights™ is a full spectrum flow cytometer that shifts the paradigm in what scientists expect to see in performance from an affordable one-to-three laser system. Cytek Northern Lights™ incorporates the same groundbreaking technologies as the Aurora system, allowing for a wide array of new fluorochrome combinations without reconfiguring your system for each application. The Northern Lights™, with its easy-to-use workflow is the highly valuable full spectrum flow solution for everyday research applications.

Sartorius: **BCA224I-1S**

Top Features and Applications of Entris® II

- LED touch technology for intuitive navigation and use
- Powerful and precise monolithic weigh cell technology exclusively available with Sartorius balances
- Automatic calibration and adjustment documentation with isoCAL
- 12 integrated applications expand usability and application potential
- Modern connectivity options for simple data transfer and analysis
- Routine weighing tasks during research, production, processing, and more
- High measurement precision and accuracy during routine weighing tasks in laboratories, research centers, production and processing facilities and more

Zetasizer Ultra: World's most advanced light scattering system

The new Zetasizer Ultra is our most advanced system for the measurement of particle and molecular size, particle charge and particle concentration, and represents the most intelligent and flexible instrument in the Zetasizer Advance range. Our flagship model enjoys all the benefits afforded by ZS Xplorer software, in terms of ease of use, analysis speed and data confidence, and also offers two unique measurement capabilities: Multi-Angle Dynamic Light Scattering (MADLS®) and particle concentration*, to offer even greater insight into your samples.

Waters - ACQUITY Premier Columns

Stop looking and start seeing – no compromise required

Reduce the risks associated with unpredictable chromatography with ACQUITY Premier Columns with MaxPeak High Performance Surfaces (HPS) Technology, which allow you to see and do more by reducing analyte/surface interactions. With Waters ACQUITY Premier Columns, chromatographers can harness the separation efficiency improvements and increased flow rates of ultra-performance liquid chromatography (UPLC) technology, improving analyte resolution, sensitivity, business productivity, and profitability. As the next evolution in the ACQUITY UPLC Column family, ACQUITY Premier Columns are built on the industry-leading sub-2- μm particle technologies from Waters you trust.
